MULTICOLOR

Change the color of the mug's interior

MULTICOLOR is a new technology of coating the inner surface of the promotional ceramics.

It is **possible** to combine the Multicolor with other decorating technologies. For example Multicolor can be combined with: Sensitive Touch, Transfer Print, Xpression – Organic Transfer Print and Direct.

If you match an imprint color on an outside surface of a mug with a coating color inside, an advertising message will be amplified.

Available color versions:

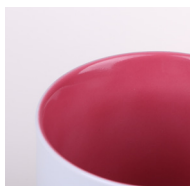

Pantone 3935

Pantone 116
